

CARBIT™ SYSTEMS

TUNGSTEN CARBIDE MAINTENANCE GRADING

A long lasting, grader edge system designed for haul road graders. Faster, safer and cost effective.

Rotating Tungsten Carbide Bits with a wear life of up to 2500 hrs reduce costs and eliminate up to 10 grader edge change-outs. Significant savings over heat treated grader edges.

Point load design enables the grader to easily cut the road surface to remove ruts undulations and shoves.

Rotating tungsten carbide bits provide excellent abrasion resistance while recycling gravel and remixing with fines.

System allows higher grading speeds for increased productivity.

Safe and easy maintenance.
